6 MSAV® Multi-Stage Air Volume

- Variable-Frequency drive (VFD) and control stages the supply air blower airflow
- Designed for use on multi-stage split systems the VFD alters the frequency and voltage of the power supply to control blower motor speed and airflow
- Supply air blower has three speeds:
 1. Low speed for part-load (Y1) cooling operation
 2. Medium speed for part-load (Y2) cooling operation
 3. High speed for full load (Y3) cooling and all heat modes
- Full speed blower operation is set by adjusting the motor pulley to deliver the desired air volume
- The ventilation speed is selectable between high and low speed

NOTE - Part load airflow in cooling mode on MSAV® Multi-Stage Air Volume units should not be set below 220 cfm/nominal full load ton to reduce the risk of evaporator coil freeze-up.

- Lower operating costs are obtained when the blower is operated on lower speeds

FEATURES AND BENEFITS

BELT DRIVE BLOWERS (Continued)

NOTE -Drive (VFD) are designed to operate on balanced, three-phase power. Operating units on unbalanced three-phase power will reduce the reliability of all electrical components in the unit. Unbalanced power is a result of the power delivery system supplied by the local utility company. Factory-installed inverters are sized to drive blower motors with an equivalent current rating using balanced three-phase power. If unbalanced three-phase power is supplied; the installer must replace the existing factory-installed inverter with an inverter that has a higher current rating to allow for the imbalance. Refer to the installation instructions for additional information and replacement information.

MSAV® Multi-Stage Air Volume Sequence of Operation

- Ventilation speed is determined by the VENT SPEED switch setting on VFD control board (LO or HI)
- Blower operates up to three speeds for mechanical cooling
- Blower operates in high speed for any other mode (free cooling and heating)
- Economizer damper minimum position is fully closed in unoccupied mode
- In occupied mode, the economizer damper minimum position is determined by the setting of the two potentiometers on VFD control board
 - LO SPD MIN POS potentiometer sets the minimum position when blower is operating at low speed
 - HI SPD MIN POS potentiometer sets the minimum position when blower is operating at high speed

BLOWER DATA

EL072KA

All data is measured external to the unit with dry coil and standard 2 in. air filters in place.

FOR ALL UNITS ADD:

1 - Wet indoor coil air resistance of selected unit.

2 - Any field installed accessories air resistance (electric heat, economizer, etc.) See page 20.

Then determine from table the blower motor hp and drive rpm required. See page 19 for blower drive specifications.

BLOWER DATA

EL090KA

All data is measured external to the unit with dry coil and standard 2 in. air filters in place.

FOR ALL UNITS ADD:

1 - Wet indoor coil air resistance of selected unit.

2 - Any field installed accessories air resistance (electric heat, economizer, etc.) See page 20.

Then determine from table the blower motor hp and drive rpm required. See page 19 for blower drive specifications.

BLOWER DATA

EL120KA

All data is measured external to the unit with dry coil and standard 2 in. air filters in place.

FOR ALL UNITS ADD:

1 - Wet indoor coil air resistance of selected unit.

2 - Any field installed accessories air resistance (electric heat, economizer, etc.) See page 20.

Then determine from table the blower motor hp and drive rpm required. See page 19 for blower drive specifications.

BLOWER DATA

EL180KA

All data is measured external to the unit with dry coil and standard 2 in. air filters in place.

FOR ALL UNITS ADD:

1 - Wet indoor coil air resistance of selected unit.

2 - Any field installed accessories air resistance (electric heat, economizer, etc.) See page 20.

Then determine from table the blower motor hp and drive rpm required. See page 19 for blower drive specifications.

BLOWER DATA

EL240KA

All data is measured external to the unit with dry coil and standard 2 in. air filters in place.

FOR ALL UNITS ADD:

1 - Wet indoor coil air resistance of selected unit.

2 - Any field installed accessories air resistance (electric heat, economizer, etc.) See page 20.

Then determine from table the blower motor hp and drive rpm required. See page 19 for blower drive specifications.

NOTE - Using total air volume and system static pressure requirements, determine from blower performance tables rpm and motor horsepower required.

Maximum usable horsepower of motors furnished by Lennox are shown. In Canada, nominal motor horsepower is also maximum usable motor horsepower. If motors of comparable horsepower are used, be sure to keep within the service factor limitations outlined on the motor nameplate.

S - Factory installed standard

O - Factory Installed with extended lead time (available with 460 volt models only).
