## BACNET IP & MS/TP STANDARD

The Lennox® CORE Unit Controller can connect to BACnet IP or MS/TP systems, without any additional hardware or accessories, saving costs and customization across large organizations. The CORE Unit Controller features a 2 port IP switch, meaning units can be daisy chained unit to unit, eliminating the cost and complexity of traditional star networks. The Unit Controller is designed to security standard NIST-140-2 for peace of mind integrating into a building network. The Unit Controller can be easily commissioned and integrated using the Lennox® CORE Service App (available for iOS and Android).

## NEW POINTS AND SENSOR SUPPORT

The CORE Unit Controller features 16 new BACnet objects to integrate with to provide additional controls customization and monitoring to help optimize your organization's equipment. New network control objects for humidity and outdoor air help ensure occupant comfort. New system status objects and prognostic and diagnostic alarms enable data-driven asset management and lower operating costs.

## BACKWARDS COMPATIBILITY

Support for MS/TP and legacy control objects means that Model L and Enlight units equipped with the CORE Unit Controller will install directly onto most Energence and L-Series control frameworks, with little modified programming or integration work required. The Unit Controller supports monitor-only, room sensor, and network thermostat control, allowing you to choose how you want your system to operate.
