BLOWER

7 Variable Speed Direct Drive Blower

- Each blower assembly statically and dynamically balanced
- Blower assembly easily removed for servicing

Variable Speed Blower Motor

- Variable speed motor maintains specified air volume from 0 though 0.80 in. w.g. (heating) and 0 through 1.0 in. w.g. (Cooling) static range
- Variable speed operation is achieved by the use of an ECM (Electronically Commutated Motor) motor
- Motor is controlled by furnace control
- Change in blower speed is easily accomplished by simple DIP switch change on the furnace control
- During start-up the blower motor slowly ramps up to normal operating speed to minimize noise and increases comfort
- At the end of a cooling or heating cycle, the motor slowly ramps down after a short blower "off" delay
- If continuous blower operation has been selected, the variable speed motor will slowly ramp down until it reaches the airflow for that condition
- Motor is resiliently mounted
- See Blower Data tables

NOTE - When furnaces are used with the Harmony III™ Zoning System, blower motor operates from predetermined minimum - maximum air volumes to satisfy zone requirements.

NOTE - Refer to Winter Design Temperatures Map on page 9 for application information. Also refer to the installation instructions for detailed information.

FEATURES

CONTROLS

8 SureLight® Integrated Furnace Control

- Contains all necessary controls and relays to operate furnace
- Combustion air inducer is operated by the integrated furnace control.
 - Prior to ignition, a low speed pre-purge cycle for 15 seconds is initiated
 - After the main burners are turned off, a post-purge cycle for 5 seconds is run
- Flame sensor utilizes flame rectification for safe and reliable operation
- Should flame fail to ignite, control will initiate 5 re-attempts at ignition before locking out unit operation for 60 minutes
- Watchguard type circuit automatically resets ignition controls after one hour of continuous thermostat demand after unit lockout, eliminating nuisance calls for service
- Ignition control has single red LED to indicate status and as an aid in troubleshooting
- The last 10 codes are stored in non-volatile memory (accessible by recall button on control) for servicing
- Two terminals are furnished for additional power supply requirements for 120 volt (less than 1 amp) powered IAQ accessories
- Blower speed - for second stage cool four air volume selections are selected by DIP switches on control
- Cool speed can be adjusted to correct optional cooling capacity
- See Blower Performance tables
- First stage blower speed is a percentage of second stage speed
- ADJUST DIP switch allows normal (NORM), 10% higher (+ plus) or 10% lower (- minus) motor speed selection within the HEAT and COOL speeds selected for fine tuning air volume
- Controls humidity by controlling blower and compressor speed on two-stage outdoor units when used with Lennox Lennox® M30 Smart Wi-Fi Thermostat or separate humidity control

Passive Dehumidification

- For situations where humidity control is a desired, a passive dehumidification feature is built into the variable speed motor
- Motor runs at 82% for 7-1/2 minutes and then at 100% (if needed) until demand is satisfied. Once demand is met, motor ramps down to 82% for one minute before shut off

Active or Humiditrol® Dehumidification

- A jumper on the control must be clipped to enable active dehumidification and/or operation with a Humiditrol® Whole-Home Dehumidification System
- A humidity controlling thermostat or separate humidity control is also required
 - During a call for cooling, air volume is automatically reduced, forcing humidity removal by the air conditioner or heat pump system
- After the humidity has reached the desired set-point the cooling air volume returns to its designed rate
- A dehumidification signal from the thermostat reduces the cooling cfm to 70% of the requested cooling cfm
- In heat mode, blower on time is fixed at 30 seconds (non-adjustable), blower off time is adjustable via DIP switches on the furnace control
- For air-conditioning applications, blower on time is 2 seconds (non-adjustable) following thermostat demand for cooling
- Control is factory installed in the unit control box.

24 Volt Transformer (40VA)

- Furnished and factory installed on outside of control box
- Circuit breaker (furnished) is wired in series

Field Wiring Make-Up Box

- Furnished for line voltage wiring
- Factory installed internally on left side of furnace

OPTIONAL RETURN AIR BASE
(Upflow Applications Only - For use with A, B and C cabinets)

NOTE- Optional Side Return Air Filter Kits are not for use with Optional Return Air Base.

- ¹ Both the unit return air opening and the base return air opening must be covered by a single plenum or IAQ cabinet. Minimum unit side return air opening dimensions for units requiring 1800 cfm or more of air (W x H): 23 x 11 in. (584 x 279 mm). The opening can be cut as needed to accommodate plenum or IAQ cabinet while maintaining dimensions shown. Side return air openings must be cut in the field. There are cutting guides stenciled on the cabinet for the side return air opening. The size of the opening must not extend beyond the markings on the furnace cabinet.
- ² To minimize pressure drop, the largest opening height possible, up to 14 in. (356 mm), is preferred.
