Purchaser: _____
Submitted to: _____
Unit designation: _____

Location: _____
Engineer: _____
Reference: _____ Approval _____ Construction _____
Schedule #: _____

General Information

- Compatible with R-32 VRF air, water, and mini-VRF systems.
- The indoor unit shall have a built-in Wi-Fi adapter as standard to allow control and monitoring using the Samsung SmartThings app.
- OAP Duct unit shall be within 50-100% of the outdoor unit's nominal capacity.
- If OAP Duct is connected to the same system with other types of indoor units, the OAP Duct capacity shall be 30% or less of the outdoor unit nominal capacity.

Construction

- The unit shall be constructed of galvanized steel with insulation.

Refrigerant System

- The heat exchanger shall be mechanically bonded aluminum fin to copper tube.
- Refrigerant flow shall be controlled by electronic expansion valve at the indoor unit.
- The indoor unit shall include an R-32 alarm output plug for simple notification or interlock of third-party equipment upon R-32 leak detection (VSTAT10P-1 accessory required).
- An internal bypass valve shall allow refrigerant to bypass the OAP duct coil while the unit is operating in Fan mode and the outdoor unit is operating in Heating mode.
- The unit shall include a discharge air temperature sensor with target discharge temperature control capability.

Indoor Fan

- Indoor fan shall be a twin, backward curved centrifugal type with a single fan motor.
- The OAP duct indoor unit shall supply the space with 100% fresh air.

Controls

- Control wiring shall be 2 X 16 AWG wire.
- The unit shall be operated via a wired remote controller model VSTAT04P-1, purchased separately.
- OAP Duct shall not share a wired controller with other types of indoor units.

External Heat Control

- External heat control functionality allows for configuration of fan operation during auxiliary heat operation, defrost, and emergency heat (VSTAT10P-1 accessory required).
- External heat control configuration settings include outside ambient external heat lockout, outside ambient compressor lockout, and time delay options (VSTAT10P-1 accessory required).
- Emergency heat functionality allows the system to continue controlling the external heat source even when system errors prevent the heat pump from operating (VSTAT10P-1 accessory required).
- External heat control functionality allows for configuration of fan operation during auxiliary heat operation, defrost, and emergency heat.
- Emergency heat functionality allows the system to continue controlling the external heat source even when system errors prevent the heat pump from operating.

Convenience

- Emergency Temperature Output (ETO) function: when indoor unit is in error status or when room temperature exceeds configurable temperature level, the system outputs a signal to an external source, e.g., backup system, building management system, alert device (ex: status light, warning lamp, buzzer).
